

# ETH ROBOTICS SUMMER SCHOOL

## LINUX & ROS CHEAT SHEET

AUTONOMOUS SYSTEMS LAB  
LAST UPDATED: MAY 15, 2020

## File Commands

\$ ls	list contents of the current directory
\$ ls -al	list hidden contents of the current directory
\$ cd	change the directory to home
\$ cd -	change the directory to the previous one
\$ cd \$DIR	change the directory to \$DIR
\$ mkdir \$DIR	make a new directory named \$DIR
\$ pwd	print the working directory
\$ rm \$FILE	remove \$FILE
\$ rm -r \$DIR	remove \$DIR recursively
\$ rm -f \$FILE	force remove \$FILE
\$ rm -rf \$DIR	force remove \$DIR recursively
\$ cp \$FILE1 \$FILE2/\$DIR	copy \$FILE1 to \$FILE2/\$DIR
\$ cp -r \$DIR1 \$DIR2	copy \$DIR1 to \$DIR2 recursively
\$ mv \$FILE1 \$FILE2/\$DIR	move \$FILE1 to \$FILE2/\$DIR
\$ ln -s \$FILE \$LINK	create a symbolic link \$LINK to \$FILE
\$ touch \$FILE	create \$FILE
\$ cat \$FILE	view content of \$FILE
\$ cat > \$FILE	write input into \$FILE
\$ echo \$STRING/\$VAR	print \$STRING/value of \$VAR
\$ more \$FILE	print content of \$FILE
\$ head \$FILE	print the first 10 lines of \$FILE
\$ tail \$FILE	print the last 10 lines of \$FILE
\$ gedit \$FILE	edit \$FILE using GUI text editor
\$ vim \$FILE	edit \$FILE using Vim

## System Information

\$ env	print environment variables
\$ date	print system date and time
\$ man \$COMMAND	print user manual of \$COMMAND
\$ whereis \$APP	print locations of \$APP
\$ which \$APP	print executable file of \$APP
\$ ps	print process status
\$ ps -aux	print all running process
\$ htop	print currently running processes and more
path symbolic links	. current directory
	.. parent directory
	~ home directory
	/ root directory
output direction	> to a file (rewrite)
	>> to a file (append)
	pipe output of first command to second

## Linux Shell

Ctrl+C	kill the current process
Ctrl+Z	suspend the current process
\$ fg	resume the suspended process in foreground
\$ bg	resume the suspended process in background
Ctrl+W	erase one word in the current line
Ctrl+U	erase the whole current line
Ctrl+R	reverse search in the previous commands
Ctrl+A	go to the beginning of the line
Ctrl+E	go to the end of the line
Ctrl+D	log out of the current session
\$ exit	log out of the current session
\$ clear	clear the terminal screen

Use Ctrl+R to reverse search, type part of a command and hit Ctrl+R repeatedly. Ctrl+A is especially useful when you forget to add sudo before the command.

## Git

\$ git clone \$URL	clone the repository from \$URL
\$ git status	print current branch status \$BRANCH
\$ git branch \$BRANCH	create a new branch named \$BRANCH
\$ git checkout \$BRANCH	switch to the branch named \$BRANCH
\$ git merge \$BRANCH	combine \$BRANCH into the current one
\$ git fetch	download all history from GitHub
\$ git merge	combine remote branches into local branch
\$ git push	upload all local branch commits to GitHub
\$ git pull	update local branch from GitHub
\$ git log	list version history for current branch
\$ git log --follow \$FILE	list version history for \$FILE
\$ git show \$COMMIT	output content changes of \$COMMIT
\$ git add \$FILE	stage \$FILE
\$ git commit -m "\$MESSAGE"	commit staged file with \$MESSAGE
\$ git reset \$FILE	reset \$FILE
\$ git reset --hard	reset all uncommitted changes
\$ git clean -fd	recursively force remove unstaged files

## Secure Shell (SSH)

\$ ssh \$USER@\$HOST	connect \$HOST as \$USER
\$ ssh \$IP_ADDRESS	connect \$IP_ADDRESS
\$ ssh -p \$PORT \$USER@\$HOST	connect \$HOST on \$PORT as \$USER
\$ ssh-copy-id \$USER@\$HOST	add the key to \$HOST as \$USER

## Package

\$ sudo apt-get update	synchronize package index files from sources
\$ sudo apt-get upgrade	install latest versions of installed packages
\$ sudo apt-get install \$PACKAGE	install \$PACKAGE
\$ sudo dpkg -i \$PACKAGE.deb	install a Debian package \$PACKAGE.deb
./configure	configure building settings
\$ make	build the program from source code
\$ make install	install the program

## Terminator

Ctrl+Shift+I	open a new window
Ctrl+Shift+T	open a new tab
Ctrl+Shift+E	split terminals vertically
Ctrl+Shift+O	split terminals horizontally
Alt+<arrow key>	switch to a different terminal

## Terminal Multiplexer (TMUX)

\$ tmux	start TMUX
\$ tmux ls	list all sessions
\$ tmux a -t \$SESSION_NAME	attach to \$SESSION_NAME
\$ tmux new -s [\$SESSION_NAME]	create a new session with \$SESSION_NAME
Ctrl+B	prefix
Prefix+%	split terminals horizontally
Prefix+"	split terminals vertically
Prefix+<arrow key>	switch to a different terminal
Prefix+C	create a new window in current session
Prefix+\$NUM	switch to \$NUM window
Prefix+D	detach from the current session

## Searching

\$ grep \$PATTERN \$FILES	search for \$PATTERN in \$FILES
\$ grep -r \$PATTERN \$DIR	search for \$PATTERN recursively in \$DIR
\$ grep -n \$PATTERN \$FILES	search for \$PATTERN and print line numbers
\$ grep -C1 \$PATTERN \$FILES	search for \$PATTERN and print 1-line context
\$ \$CMD   grep \$PATTERN	search for \$PATTERN in \$CMD's output
\$ sudo updatedb	update searching database for locate command
\$ locate -b \$PATTERN	find files and dirs containing \$PATTERN

## Docker

\$ Placeholder
\$ Placeholder
\$ Placeholder
\$ Placeholder
\$ Placeholder
\$ Placeholder
\$ Placeholder
\$ Placeholder

## Miscellaneous

\$ sudo \$COMMAND	run \$COMMAND with elevated privilege
\$ \$COMMAND --help	print \$COMMAND's usage help
\$ ip address	print all internet protocol addresses
\$ ping \$HOST	ping \$HOST and print results
\$ tar xzf \$FILE.tar.gz	extract files from \$FILE.tar.gz

# ROS Catkin Workspace

\$ roscd <b>\$PACKAGE</b>	change directory to <b>\$PACKAGE</b> 's location
\$ catkin build	build the whole workspace
\$ catkin build <b>\$PACKAGE</b>	build <b>\$PACKAGE</b>
\$ catkin clean	clean the whole workspace
\$ catkin config <b>\$OPTIONS</b>	configure catkin workspace with <b>\$OPTIONS</b>
\$ wstool init	set up current directory as workspace
\$ wstool merge <b>\$ROSINSTALL</b>	merge <b>\$ROSINSTALL</b> into the workspace
\$ wstool up	update configuration elements

Always remember to **\$ source ~/catkin\_ws/devel/setup.bash**.

# ROS Run

\$ roscore	invoke the core of ROS
\$ roslaunch <b>\$PACKAGE</b> <b>\$LAUNCHFILE</b>	launch <b>\$LAUNCHFILE</b> in <b>\$PACKAGE</b>
\$ rosrun <b>\$PACKAGE</b> <b>\$EXECUTABLE</b> [ <b>\$PARAM:-- \$VALUE</b> ]	
\$ run node <b>\$EXECUTABLE</b> from <b>\$PACKAGE</b> [with <b>\$PARAM</b> set to <b>\$VALUE</b> ]	

# ROS Node

\$ rostopic ping <b>\$NODE</b>	test connectivity to <b>\$NODE</b>
\$ rostopic list	list active nodes
\$ rostopic info <b>\$NODE</b>	print information about <b>\$NODE</b>
\$ rostopic machine	list nodes running on the machine
\$ rostopic kill <b>\$NODE</b>	kill the running <b>\$NODE</b>

# ROS Parameter

\$ rosparam list	list all parameter names
\$ rosparam set <b>\$PARAM</b> <b>\$VAL</b>	set value of <b>\$PARAM</b> to <b>\$VAL</b>
\$ rosparam get <b>\$PARAM</b>	print value of <b>\$PARAM</b>
\$ rosparam load <b>\$YAML</b>	load parameters from <b>\$YAML</b>
\$ rosparam dump <b>\$YAML</b>	dump parameters to <b>\$YAML</b>
\$ rosparam delete <b>\$PARAM</b>	delete <b>\$PARAM</b>

# ROS Topic

\$ rostopic list	print information about active topics
\$ rostopic bw <b>\$TOPIC</b>	display bandwidth used by <b>\$TOPIC</b>
\$ rostopic echo <b>\$TOPIC</b>	print messages from <b>\$TOPIC</b>
\$ rostopic find <b>\$TYPE</b>	find topics of <b>\$TYPE</b>
\$ rostopic hz <b>\$TOPIC</b>	display publishing rate of <b>\$TOPIC</b>
\$ rostopic info <b>\$TOPIC</b>	print information about <b>\$TOPIC</b>
\$ rostopic pub <b>\$TOPIC</b>	publish data to <b>\$TOPIC</b>
\$ rostopic type <b>\$TOPIC</b>	print type of <b>\$TOPIC</b>
\$ rosmmsg show <b>\$TYPE</b>	print structure of <b>\$TYPE</b>

# ROS Service

\$ rosservice list	list active services
\$ rosservice call <b>\$SERVICE</b> <b>\$ARGS</b>	call <b>\$SERVICE</b> with <b>\$ARGS</b>
\$ rosservice find <b>\$TYPE</b>	find services of <b>\$TYPE</b>
\$ rosservice info <b>\$SERVICE</b>	print information about <b>\$SERVICE</b>
\$ rosservice type <b>\$SERVICE</b>	print type of <b>\$SERVICE</b>
\$ rosservice uri <b>\$SERVICE</b>	print uri of <b>\$SERVICE</b>
\$ rossrv show <b>\$TYPE</b>	print structure of <b>\$TYPE</b>

# ROS Environmental Variables

ROS_ROOT	location of core ROS packages
ROS_MASTER_URI	location of the master
ROS_PACKAGE_PATH	location for more ROS packages
ROS_HOSTNAME	network address of a node
ROS_IP	IP address of a node

# ROS Bag

\$ rosbag record <b>\$TOPIC</b>	record <b>\$TOPIC</b> into bag
\$ rosbag info <b>\$BAG</b>	print content summary of <b>\$BAG</b>
\$ rosbag play <b>\$BAG</b>	play back content of <b>\$BAG</b>
\$ rosbag check <b>\$BAG</b>	check play-ability of <b>\$BAG</b> in current system
\$ rosbag compress <b>\$BAG</b>	compress <b>\$BAG</b> using BZ2
\$ rosbag decompress <b>\$BAG</b>	decompress <b>\$BAG</b> using BZ2

When simulating in ROS, remember **\$ set use\_sim\_time true** and to append **--clock**.

# ROS Visualization Tools

\$ rviz	3D visualization of data and models
\$ gzclient	Gazebo GUI
\$ rqt	powerful GUI tool
\$ rqt_plot	simple and lightweight plotting
\$ rqt_bag	visualize content of a bag
\$ rqt_image_view	visualize camera images
\$ rqt_graph	visualize computation graph
\$ rqt_tf_tree	visualize TF frame tree

# ROS Packge Structure

package.xml	manifest, dependencies and plugins
CMakeLists.txt	description of compilation procedure
src/	C and C++ source codes
build/	generated makefiles and support files
devel/	compiled binaries, libraries, headers
include/	C and C++ header files
scripts/	Python and bash scripts
config/	YMAL configuration files
cfg/	dynamic reconfigure scripts
launch/	launch files

# ROS TF2

\$ rosrn tf tf_echo <b>\$FRAME1</b> <b>\$FRAME2</b>	print frame relationship between <b>\$FRAME1</b> and <b>\$FRAME2</b>
\$ rosrn tf tf_echo /map /odom	
\$ rosrn tf view frames	visualize coordinate transform tree

tf2 is a power package to deal with coordinate transform. It maintains the relationship between coordinate frames in a tree structure buffered in time, and lets the user transform points, vectors, etc between any two coordinate frames at any desired point in time.

# ROS Launch File Elements

<node>	launch a node
<param>	set a parameter on the parameter server
<remap>	declare a name mapping
<rosparam>	set ROS parameters for the launch
<include>	include other roslaunch files
<env>	specify an environment variable for launched nodes
<arg>	declare an argument
<group>	group enclosed elements sharing a namespace or remap

# SMB Workspace

Key Packages	
rovio	robust visual inertial odometry framework
maplab	visual-inertial mapping framework
voxblox	volumetric mapping library
apriltag	visual fiducial system
elevation_mapping	produce elevation map around robot
traversability_estimation	traversability mapping for rough terrain
icp_mapper	iterative closest point based slam system
smb_local_planner	path planning system for SMB

Always remember to charge your SMB after each use.

CANDIDATE  
CONTENTS

## Compression

\$ tar cf <code>\$FILE.tar</code> <code>\$FILES</code>	convert <code>\$FILES</code> into <code>\$FILE.tar</code>
\$ tar xf <code>\$FILE.tar</code>	extract files from <code>\$FILE.tar</code>
\$ tar czf <code>\$FILE.tar.gz</code> <code>\$FILES</code>	compress <code>\$FILES</code> into <code>\$FILE.tar.gz</code> using Gzip
\$ tar xzf <code>\$FILE.tar.gz</code>	extract files from <code>\$FILE.tar.gz</code> using Gzip
\$ gzip <code>\$FILE</code>	compress <code>\$FILE</code> and rename it as <code>\$FILE.gz</code>
\$ gzip -d <code>\$FILE.gz</code>	decompress <code>\$FILE.gz</code> back to <code>\$FILE</code>

## Network

\$ ip address	print all internet protocol addresses
\$ ping <code>\$HOST</code>	ping <code>\$HOST</code> and print results
\$ whois <code>\$DOMAIN</code>	print information about <code>\$DOMAIN</code>
\$ dig <code>\$DOMAIN</code>	print DNS of <code>\$DOMAIN</code>
\$ dig -x <code>\$HOST</code>	reverse lookup <code>\$HOST</code>
\$ wget <code>\$FILE</code>	download <code>\$FILE</code>

## Thomas Comments

Ctrl+Alt+T is a desktop environment shortcut actually. However, it fits in the Linux Shell section for now.

launch file section i only useful, if the (at least most commonly used) arguments are explained as well.

ROS variables.
